## **About the Book**

Coronavirus is a type of virus. There are many different types, some of which cause illness. SARS-CoV-2, a coronavirus identified in 2019, has caused a pandemic of respiratory disease called COVID-19.

The devastating effects of the novel coronavirus disease (COVID-19) are now upon us. It affected public health, the environment, human psychology, global socioeconomics, and education.

The sudden onslaught of this virus has prompted us to do intensive research, and post-pandemic global studies of COVID-19 have proven to be the way forward for health, the environment and the socioeconomy.

Extensive research and experience are positive outcomes in the post-pandemic period. This book attempts to summarize such necessary research based solely on COVID-19.

The book covers all areas impacted by COVID-19, from public health to the environment, education, economics to human psychology.

Numerous academic, scientific, and pharmaceutical experts have contributed conscientiously to this compilation. We provide an overview of the findings of research centered on the Pandemic and post-pandemic eras.

## Index
