About the Book

Education is facilitating learning or acquiring knowledge, skills, values, morals, beliefs, and habits. Educational methods include teaching, training, storytelling, discussion and directed research. Education frequently takes place under the guidance of educators; however, learners can also educate themselves. It can occur in formal or informal settings and any experience that has a formative effect on how one thinks, feels, or acts may be considered educational. Formal education is commonly divided formally into such stages as preschool or kindergarten, primary school, secondary school and then college, university, or apprenticeship.

Educational research is a type of systematic investigation that applies empirical methods to solving challenges in education. It adopts rigorous and well-defined scientific processes to gather and analyze data for problem-solving and knowledge advancement.

Books are the best way to spread knowledge; they have great importance and are the most valuable source.

Educational Development (Volume 4) is another successful attempt to disseminate knowledge in the field of education. After the overwhelming response for the quality publication of the first and second volume, the publication of the third volume was done.

This edited book has compiled expert knowledge and the latest research outcomes to update the readers. It has touched almost all aspects of education.
